The pursuit of nature's smallest parts is one of mankind's oldest quests, beginning at least 26 centuries ago. But, just in our lifetimes it seems we've finally "hit bottom." Each step deeper into the Micro-World has revealed surprises, and expanded our understanding of nature on all size scales. At the bottom, we see a remarkable unity — nature is the same everywhere. Instead, everything everywhere in the universe is made of just the same few elementary parts.

Einstein said: "The most incomprehensible thing about the universe is that it is comprehensible." Now we know why. It is

the simplicity of its smallest parts that allows us to comprehend the bewildering diversity and scope of our universe.
