Christopher Monckton, Viscount of Brenchley

You have been inundated with reports from media, governments, think tanks and “experts” saying that our climate is changing for the worse and it is our fault. Increases in droughts, heat waves, tornadoes and poison ivy—to name a few—are all blamed on our “sins of emissions” from burning fossil fuels and increasing carbon dioxide in the atmosphere. Yet, you don’t quite buy into this human-caused climate apocalypse. You aren’t sure about the details because you don’t have all the facts and likely aren’t a scientist. *Inconvenient Facts* was specifically created for you.

Writing in plain English and providing easily understood charts and figures, Gregory Wrightstone presents the science to assess the basis of the threatened Thermageddon.

The book’s 60 “inconvenient facts” come from government sources, peer-reviewed literature or scholarly works, set forth in a way that is lucid and entertaining. The information likely will challenge your current understanding of many apocalyptic predictions about our ever dynamic climate.

You will learn that the planet is improving, not *in spite* of increasing CO<sub>2</sub> and rising temperature, but *because* of it. The very framework of the climate-catastrophe argument will be confronted with scientific fact.

Arm yourself with the truth.
