Voyager 1 left our solar system in 2012; its sister craft, *Voyager 2*, did so in 2018. The fantastic journey began in 1977, before the first episode of *Cosmos* aired. The mission was planned as a grand tour beyond the moon; beyond Mars, Jupiter, Saturn, Uranus and Neptune; and maybe even into interstellar space. The fact that it actually happened makes this humanity's greatest space mission.

In *The Interstellar Age*, award-winning planetary scientist Jim Bell reveals what drove and continues to drive the members of this extraordinary team, including Ed Stone, *Voyager's* chief scientist and the one-time head of NASA's Jet Propulsion Lab; Charley Kohlhase, an orbital dynamics engineer who helped to design many of the critical slingshot maneuvers around planets that enabled the *Voyagers* to travel so far; and the geologist whose Earth-bound experience would prove of little help in interpreting the strange new landscapes revealed in the *Voyagers'* astoundingly clear images of moons and planets.

Speeding through space at a mind-bending eleven miles a second, *Voyager 1* and *Voyager 2* are now beyond our solar system's planets, the first man-made objects to go interstellar. By the time *Voyager* passes its first star in about 40,000 years, the gold record on the spacecraft, containing various music and images including Chuck Berry's "Johnny B. Goode," will still be playable.
