In his ground breaking first book, veteran researcher and inventor/scientist Karl Dahlstrom and co-author C. Phillip Clegg have written an exceptionally readable, mind expanding and almost equation free account of how an accidental discovery of a relatively new mathematical theorem came to overturn an established scientific paradigm. The best theories of the universe are beautiful, simple and profound as in Einstein's famous formula, $E=MC^2$. This book is elegant in its simplicity and yet complex in its scope of re-defining an ordered universe comprising an unseen force. This book zeros in on a 150 year old controversy of Darwinian Evolution and tears it apart with laser like precision such that the very core of that "theory" is—to borrow a phrase from

Descartes'—"rent asunder". As the saying goes, "There is nothing new under the sun." Since the birth of the universe, an organizing principle of matter, embedded in the natural laws of physics, and eventually life itself has manifested itself in a precise and verifiable pattern found in literally everything that exist: from the composition of meteorites to seawater, soil, and gasses here on earth as well as in tabulated data on everything from stock prices to lengths of rivers. This discovery, of a little known law of mathematics called Benford's Law, simply states that in any tabulated data set of non-contrived numbers, the frequency of the occurrence of the first significant digits 1 through 9, as the first significant digit, will conform to a set pattern: '1' will occur 30.x% of the time;'2' will occur 17.x% of the time, etc. with the frequency of each succeeding number being less than the preceding number in a fixed declining pattern.
